IN THE CLAIMS

The claims are presented for reference as follows:

1.   (Previously presented)   A method of receiving content data for a user interface of a device, the method comprising:

receiving, by a device, content data for a user interface from a communications interface;

processing the received content data to form a user interface for the device, wherein the content data comprises metadata; and

accessing content data updates via the communications interface in accordance with the content data metadata.

2.   (Original)   A method according to claim 1, wherein the metadata comprises an address for content data updates and the device accesses the content data updates located at the address.

3.   (Original)   A method according to claim 1, wherein the metadata comprises a first address and the device queries the first address to obtain a second address, the device accessing the content data updates located at the second address.

4.   (Original)   A method according to claim 3, wherein the first address locates a database, the database comprising addresses for a plurality of content data updates.

5.   (Previously presented)   A method according to claim 1, wherein the metadata comprises data which determines the frequency at which the device accesses content data updates.

6.   (Previously presented)   A method according to claim 1, wherein the metadata comprises data which defines events that cause the device to access content data updates.

2

7.   (Previously presented)   A method according to claim 1, wherein the content data updates accessed by the device are received via the communications interface, processed by the device and used to update the device user interface.

8.   (Previously presented)   A data carrier, comprising:
    computer-executable code for performing:
            receiving content data, wherein the content data comprises metadata;
            processing the received content data to form a user interface for a device; and
            accessing content data updates in accordance with the content data metadata.

9.   (Previously presented)   A device, comprising:
    a user interface;
    a display means for displaying the user interface;
    a communications interface for receiving content data for use in the user interface;
    a processor to process received content data to form the user interface; and
    wherein the content data comprises metadata and the device is configured to access content data updates via the communications interface in accordance with the content data metadata.

10.   (Original)   A device according to claim 9 wherein the device is configured to access content data updates at an address comprised within the metadata.

11.   (Original)   A device according to claim 9 wherein the device is configured to query an address comprised within the metadata, wherein the result of the query is a second address that identifies a content data update.

12.   (Previously presented)   A device according to claim 9, wherein the metadata comprises data which configures the device to access content data updates at a predetermined frequency.

3

13.   (Previously presented)   A device according to claim 9, wherein the metadata comprises data which configures the device to access content data updates in response to pre-defined events.

14.   (Previously presented)   A device according to claim 9, wherein the device is further configured to receive content data updates via the communications interface, process the received content data updates and update the device user interface accordingly.

15.   (Previously presented)   The data carrier according to claim 8, wherein the metadata comprises an address for content data updates and the device accesses the content data updates located at the address.

16.   (Previously presented)   The data carrier according to claim 8, wherein the metadata comprises a first address and the device queries the first address to obtain a second address, the device accessing the content data updates located at the second address.

17.   (Previously presented)   The data carrier according to claim 16, wherein the first address locates a database, the database comprising addresses for a plurality of content data updates.

18.   (Previously presented)   The data carrier according to claim 8, wherein the metadata comprises data which determines the frequency at which the device accesses content data updates.

19.   (Previously presented)   The data carrier according to claim 8, wherein the metadata comprises data which defines events that cause the device to access content data updates.

20.   (Previously presented)   The data carrier according to claim 8, further comprising computer-executable code for processing the content data updates and updating the user interface.

4

21.   (Previously presented)   A device, comprising:

means for receiving content data, wherein the content data comprises metadata;

means for processing the received content data to form a user interface for the device; and

means for accessing content data updates in accordance with the content data metadata.

22.   (Previously presented)   The device according to claim 21, wherein the metadata comprises an address for content data updates and the device accesses the content data updates located at the address.

23.   (Previously presented)   The device according to claim 21, wherein the metadata comprises a first address and the device queries the first address to obtain a second address, the device accessing the content data updates located at the second address.

24.   (Previously presented)   The device according to claim 23, wherein the first address locates a database, the database comprising addresses for a plurality of content data updates.

25.   (Previously presented)   The device according to claim 21, wherein the metadata comprises data which determines the frequency at which the device accesses content data updates.

26.   (Previously presented)   The device according to claim 21, wherein the metadata comprises data which defines events that cause the device to access content data updates.

27.   (Previously presented)   The device according to claim 21, further comprising means for processing the content data updates and updating the user interface.
